XVI. COMPUTER SOCIETY MAGAZINE (CS MAGS) STYLE GUIDE.....	33

I. INTRODUCTION

This style manual provides general editing guidelines for IEEE Magazines. For guidance in grammar and usage not included in this manual, please consult the most recent version of the *Chicago Manual of Style*, published by the University of Chicago Press. The IEEE’s responsibility in editing articles is not to make any determination on or do any editing of the technical content we work with, but is instead to render the work as readable, grammatically correct, and as consistent with IEEE style as possible.

II. STYLE AND USAGE

A. CAPITALIZATION

1) *Headlines and Subheads*

We follow the “headline style” in *The Chicago Manual of Style*, except that prepositions of three letters or fewer should be lowercase in heads and subheads:

Time-Frequency Analysis of Heart-Rate Variability
Playing With Fire and Without Matches
Better Protection for Improved Detection

- All verbs should be initial capped (note: in infinitives, “to” is not initial capped).
- Articles (a, an, the) and coordinating conjunctions (and, but, or, for, nor, ...) of three letters or fewer should be lowercase.
- Subordinating conjunctions (if, because, as, that ...) are initial capped.
- The second word in a hyphenated compound is capitalized.
- All words of four letters or more are capped.

2) *Corporate and Academic Titles*

Titles should be lowercase unless directly preceding a person’s name, except for named academic professorships/fellowships:

John Smith, professor of engineering, wrote the article.
The article was submitted by Prof. John Smith.

3) *Academic Degrees*

Academic degrees/areas of study that are written out should always be lowercase (also see the “[Academic Degree Abbreviations](#)” section):

He received a master’s degree in bioengineering.

She is pursuing a postdoctorate in computer science.

4) *IEEE Society/Member Terms*

1) IEEE subgroupings are capitalized (except committee):

the Chapter, the Section, the Society, the Region, the Division, the Council, the committee

Note that *committee* is capitalized when it is part of a proper name:

the Annual Meeting Program Committee

2) IEEE Member status is capitalized:

John Doe, Fellow, IEEE, and Steve Johnson, Senior Member, IEEE were at the meeting.

Jane Smith, Member, IEEE, said that she is from New Jersey.

Note that *member* is lowercase when referring to Society membership, when used as an adjective, or without IEEE or a name:

IEEE Power & Energy Society members have many benefits.

IEEE member benefits are plentiful.

5) *Miscellaneous Names and Terms*

- the web
- website
- World Wide Web
- Ethernet
- the Internet
- e-mail
- dataset
- Ohm’s law, Smith chart (note the lowercase “law” and “chart”)
- Gaussian
- fast Fourier transform
- AC, DC, HVDC (all caps beg. 1/27/26)
- Bitcoin: with capitalization, is used when describing the concept of Bitcoin, or the entire network itself:
I was reading about the Bitcoin protocol today.
- bitcoin: without capitalization, is used to describe bitcoins as a unit of account:
I purchased 10 bitcoins today.

B. GRAMMAR

In general, follow the most recent version of *Merriam-Webster’s Collegiate Dictionary* backed by *The Chicago Manual of Style*. For multiple accepted spellings, use the first entry.

1) *American Versus British Spelling*

Change British spelling to American spelling (e.g., colour to color) except in references and department names (i.e., do not do a “global” replace). However, use “fuse,” “programming,” and “cancellation,” as these are the most commonly used spellings.

2) Prefixes

- a) In general, do not hyphenate prefixes. However, note that some prefixes may be hyphenated or have a space between the words if used as an adverb or adjective.
- b) Do not hyphenate anti, micro, multi, non, re, and pre constructions except when used with capitalized words or numbers:
nonviolent, nonnegative, nondeterministic, but non-Gaussian
predetermined, preempt, but pre-1914
midcentury but mid-1944
- c) Do use a hyphen if the word seems unclear without one (e.g., “cointerest” would be better off as “co-interest,” “co-design” rather than “codesign,” “nanoobject” is better as “nano-object,” and “multi-interest” rather than “multiinterest”). Do not use a hyphen it creates another word (re-create vs. recreate).
- d) Compounds with “self” are usually hyphenated but words formed by adding a suffix to self are closed:
a self-reliant child, self-knowledge, self-realization
 but
selfhood, selfishness, selflessness

3) Compound Modifiers

- a) A pair of words modifying a third word separately does not get a hyphen:
a tall water tower, a hot metal cylinder
- b) However, if the first word modifies the second and together they modify the third, the first pair is hyphenated unless the first word is an adverb ending in “-ly”:
a high-frequency signal, a second-order equation
 but
a highly developed algorithm, a poorly attended conference

4) Numbers

- a) Adjectival compounds comprising a number and a unit of measure are hyphenated before the noun:
one-day time frame
65-year-old man
- b) When the unit indicator is abbreviated, also hyphenate:
12-kg weight
30-kHz signal
40-m distance
- c) Spelled-out fractions used as adjectives are hyphenated. In mixed fractions, whole numbers are not joined to the fraction:
two-thirds majority
one and one-half pages

5) *Italicized Words*

- a) If italicized names in the singular form are made plural, do not italicize the “s”; also do not italicize the possessive ending:

She bought three *New York Posts*
Titanic’s record-setting performance

- b) Do not italicize Latin words or foreign words if they are familiar:

a priori
 in situ, in vivo
 ad hoc
 et al.

- c) Do italicize Latin terms when they are part of genus, species, and subspecies names:

Rosa caroliniana
The genus Smilodovl ...

- d) Italicize the word “Magazine” when it is used in the full or shortened title of the publication:

We appreciate your interest in *IEEE Power & Energy Magazine*.

- e) Do not use the word “Magazine” alone as a replacement for the title; however, it is acceptable to use “magazine” in the following manner (do not cap the “M” or italicize the word):

The article that appeared in the June issue of this magazine won an award.

- f) When the name of a magazine is used as an acronym, the acronym (but not the parentheses) should be italicized:

In this issue of *IEEE Signal Processing Magazine (SPM)*, we have three features.

- g) Magazine titles are not italicized when they are part of the name of an award:

John Smith won the 2018 IEEE Consumer Electronics Magazine Best Paper Award.

6) *Other Punctuation*

- a) Form the possessive singular of nouns by adding “s” (*Avogadro’s theorem*). Follow this rule unless the final consonant is an s (*Burns’ theorem*). Possessive pronouns (*hers, its, yours, theirs, ours*) have no apostrophe. Indefinite pronouns use the apostrophe to show possession (*someone’s rule*). Contractions use an apostrophe (*it’s for ...; it is*). Possessives do not (*its losses*).

- b) In a series of three or more terms, use a comma immediately before the coordinating conjunction (*usually and, or, or nor*). Ex: *The data included graphs, tables, and figures.*

- c) Enclose parenthetical expressions between commas (*Improvement, as shown in Figure 1, is attained by the addition of the cogeneration*). Brief phrases or single words, such as *however*, may or may not be parenthetical (such connectives at the head of a sentence are more commonly left unpunctuated). Parenthetical material such as dates take the comma(s) as follows: *14 February 1996 or April to June 1996 or Saturday, 9 March 1996.*

- d) The abbreviations etc., i.e., and e.g., are parenthetical and use the comma as follows: cables, transformers, etc., are needed. The *Chicago Manual of Style* recommends that expressions or sentence fragments that

contain etc., i.e., or e.g., be set in between parentheses. Either way is acceptable, so it should be left to the author's discretion. Just make sure the same style is consistent within the article. Do not expand or change into “and so forth,” “among others,” etc.

- e) Abbreviations for academic degrees, titles following a name, and certain restrictive terms of identification should be punctuated as follows:
Robert D. Lorenz, Ph.D.
Ian T. Wallace, Member, requests that...
E. A. Brockmann Jr. states that...
- f) Punctuation always goes inside quotation marks, except for the colon and semicolon. Use single quotation marks around quotes within quotes. Quotes may be used around a new or special usage of a term the first time only, but use of quotes in this manner should be kept to a minimum.
- g) Do not use double parentheses in text expressions, but keep them in math. For example, (see (10)) should become [see (10)]. *Ex: The item is addressed [see Figure 10(a)].*
- h) All acronyms and numerical plurals do not use apostrophes, i.e., *FETs*, *1980s*. Always defer to the author's preference for plurals in mathematics.)
- i) Do not hyphenate chemical compounds (sodium chloride crystals). Alloys and mixtures take the en dash (Ni–Co, He–Ne laser).
- j) Do not use commas between adjectives (a planar equiangular spiral antenna).
- k) Do not hyphenate predicate adjectives (... is well known, ...is second order).
- l) Default to the author for any accent marks or any other diacritics in names, proper nouns, cities, countries, etc. within the article.

7) Hyphenation/Spacing/Spelling of Common Words: See the [Common Hyphenations and Misspellings](#) section for a complete list)

III. NUMBERS

A. WHEN TO SPELL OUT, WHEN TO USE NUMERALS

- 1) Spell out all numbers nine and under; use numerals for numbers 10 and above:
There were five volunteers from Region 9 and 15 volunteers from Region 8 at the meeting.
The board contained two DSPs, nine capacitors, and 13 transistors.

In a table, if the data are all numerals, all numbers (even those nine and below) should remain numerals.

- 2) Always spell out the number when it is the first word in a sentence or rework the sentence (for large numbers it may be best to rewrite the sentence so that it doesn't begin with the number):
Forty-five IEEE Fellows were recognized during the awards ceremony.

- 3) For ordinals, the same rules apply (use numerals for 10 and above):

The eighth trial yielded the desired results.

She placed 11th out of 200 students

- 4) Use numbers when abbreviations/symbols are used for units of measure:

Ex: 3 mm

B. PERCENTAGES AND DECIMALS

- 1) Always use the number and the percent sign when dealing with percentages. The percentage symbol is repeated in lists and ranges.

Only 2% of the transformers failed the test.

The students made up 20%–30% of the population.

- 2) When using decimal fractions in text, include the zero before decimal if needed for clarity; otherwise omit it. Do not include the zero(s) after the last digit following a decimal.

.25

0.8

C. COMMA USAGE

- 1) In text and figure labels, use a comma to indicate thousand, ten thousand, and hundred thousand:

1,000

22,000

- 2) For millions and billions, use the following format:

1 billion people

There were 2 million apes affected by the virus.

D. MONETARY UNITS

- 1) Use symbols for units of currency with numerals:

Members can subscribe to the magazine for US\$125.50.

The book was priced at CAD\$43.

- 2) For whole dollar amounts, do not use .00 after the last numeral, and delete it if included:

The price of the book was US\$25.

E. IEEE DIVISIONS AND REGIONS

- 1) IEEE Divisions are identified by Roman numerals:

IEEE Circuits and Devices Magazine is sponsored by three Societies within Division I.

- 2) IEEE Regions are identified by Arabic numerals:

Regions 2, 4, and 9 experienced dramatic membership gains.

F. TELEPHONE NUMBERS

Use the IEEE format for telephone numbers (add a plus sign and country code, remove parentheses, hyphens, or decimals):

+1 732 981 1855

+61 7 3363 7982

G. DATES

Use the international date format for all dates in the magazine. Spell out the month. (Note: This does not include references. Continue to follow IEEE Reference Style.)

4 June 2002

23-31 October 2019

3 November 2021–4 December 2021

H. CONTINUOUS NUMBERS

- 1) For continuous/inclusive numbers, use an en dash:

see pages 26–29

The war occurred during the 1893–1901 time period.

However, use “to” with “from” and “and” with “between”:

The war lasted from 1910 to 1912.

The stray cat was between 12 and 15 years old.

Note: There is an exception: References in text will not include an en dash. All references will be written out. [1]–[4] will now be [1], [2], [3], [4].

- 2) If numerals are missing, insert the missing digits:

pp. 127–39 becomes pp. 127–139

1987–89 becomes 1987–1989

IV. GEOGRAPHY

A. U.S. STATES AND TERRITORIES

- 1) Use state abbreviations when used in running text followed by USA. This includes biographies and calendars.

IEEE headquarters is located in Piscataway, NJ, USA.

The conference will take place in San Antonio, TX, USA, during November.

- 2) For a list of two-letter abbreviations used with addresses, see the “[Geographical Abbreviations](#)” section.
- 3) In text, do not add in locations of companies and organizations if the information is not provided by the author, unless it is the style of the magazine or needed for clarity. Do not delete if provided.

B. ENGLAND, WALES, CANADA, AND AUSTRALIA PROVINCES AND TERRITORIES

Use the same format as with U.S. states:

The school was founded in Calgary, AB, Canada, in 1956.

- 1) For a list of two-letter abbreviations used with addresses, see the “[Geographical Abbreviations](#)” section.

C. COUNTRIES

- 1) In general, names of countries should be spelled out. When used as an adjective, United States and United Kingdom can be abbreviated as U.S. and U.K., respectively:

He has lived in the United States since 1990.

The U.S. economy is improving.

Note that the “T” is capped in The Netherlands.

- 2) The European Union can be used as an acronym (EU) and should be defined on first use.
- 3) Türkiye should be used in place of Turkey.

D. ADDRESSES

- 1) In general, do not use abbreviations for the following words when used in running text: Avenue, Boulevard, Building, Court, Drive, Lane, Parkway, Place, Road, Square, Street, Terrace, North, South, East, West:

The office is located on Veterans Parkway.

The package was delivered to East 52nd Street.

- 2) When using mailing addresses [either displayed or within text (such as intro notes)] include the postal code and country in the following formats. In general, these can be used as a guide for the format and order for addresses in affiliations. Please note this list is not exhaustive and some exceptions may be made.

US: after city, before country, no comma

College of Electrical Engineering, Rutgers University, Piscataway, NJ 08854 USA

Canada: after city, before, comma

Food and Animal Science Laboratory, University of Ottawa, Ottawa, ON L0E 0A0, Canada

United Kingdom: before city, no comma

College of Economics, University College London, WC1E 6BT London, U.K.

Most European countries (OK to default to author for order): before city, no comma

Department of Statistics, Sapienza University of Rome, 00185 Roma, Italy

South American, Asian, and African Countries (OK to default to author for order) after city, before country, comma

Department of Electrical Engineering, University of Brasilia, Brasília-DF 70910-900, Brazil

Schools of Computer Science, Chinese University of Science and Technology, Anhui 230052, China

Faculty of Environmental Science and Engineering, Indian Institute of Technology, Karnataka 560012, India

College of Mechanical Engineering, Kyoto University, Kyoto 606-8501, Japan

School of Environmental Science and Global Research, African University of Science and Technology, Galadimawa 900107, Nigeria

Additional notes:

- Do not include street addresses of employers. For domestic authors, use official U.S. Postal Service abbreviations for states and include U.S. zip codes, and country. Note that there is no comma between the state, zip code, and country for U.S. affiliations. Use Canadian Province and international codes as listed in this manual. Also include international cities, countries, and zip codes.
- Postal codes in European countries are to be listed before the city, including U.K. locations.
- All author affiliations must include the country; this includes U.S.-based affiliations.
- For affiliations and funding in Taiwan, the country should be “Taiwan.” Remove “ROC,” “Republic of China,” etc. The country should appear only as Taiwan. Never change “ROC” or “Republic of China” to “China.” Exceptions in funding statements can be made if specifically requested by the author.
- For Hong Kong, “Hong Kong,” “Hong Kong, SAR,” and “Hong Kong, SAR, China” are all acceptable. Defer to the author.
- For South Korea, “South Korea” and “Republic of Korea” are both acceptable. Defer to the author.
- For affiliations located in Singapore, the correct format for the postal code is “Singapore [postal code].”
- In general, if an author requests that a country be listed a certain way, please defer to the author.

3) Follow the below examples for each specific author situation.

Authors with the same affiliation or multiple affiliations: For one author or if all authors have the same, or more than one, affiliation:

The author is with the Department of Electrical Engineering, Rutgers University, Piscataway, NJ 08854 USA, and also with Bellcore, Morristown, NJ 07960 USA (e-mail: author@ieee.org).

The author(s) is (are) with the Laboratory for Information and Decision Systems, Massachusetts Institute of Technology, Cambridge, MA 02139 USA (e-mail: corresponding-author@ieee.org).

Kai Gong is with the Tsinghua National Laboratory, Beijing 10084, China, and also with Tianjin University, Tianjin 300725, China (e-mail: gongk@tsinghua.edu.cn).

The authors are with the Laboratory for Information and Decision Systems, Massachusetts Institute of Technology, Cambridge, MA 02139 USA (e-mail: firstauthor@mit.edu; IamNext@mit.org; thirdauthor@ieee.org).

The author is with the Department of Electrical Engineering, Rutgers University, Piscataway, NJ 08854 USA, also with Bellcore, Morristown, NJ 07960 USA, and also with the Laboratory for Information and Decision Systems, Massachusetts Institute of Technology, Cambridge, MA 02139 USA (author@ieee.org).

Mary Wootters is with the Department of Computer Science and the Department of Electrical Engineering, Stanford University, Stanford University, Stanford, CA 94305 USA (e-mail: author@ieee.org).

Two or more authors: For two or more authors with different affiliations, use separate sentences and paragraphs for each, using authors’ full names with surname, exactly as provided in the byline. Group the authors with the same affiliation together; list the affiliations according to the order of the first author listed in the byline for each location. E-mail addresses are separated by semicolons.

Examples:

Ling Pei Li is with the Department of Electrical Engineering and the Electronics Research Laboratory, University of California at Berkeley, Berkeley, CA 94720 USA.

Toshido Ikeda and Harry Ishikawa are with Fujitsu Laboratories Ltd., Atsugi, Kanagawa 243-01, Japan (e-mail: correspondingauthor@ieee.org).

The authors are with Fujitsu Laboratories Ltd., Atsugi, Kanagawa 243-01, Japan, and also with the Department of Electrical Engineering and the Electronics Research Laboratory, University of California at Berkeley, Berkeley, CA 94720 USA (e-mail: corresponding-author@ieee.org).

Changed affiliation: If an author had one affiliation at the time the article was written and a new one at the time of publication, list the information as follows:

The author was with the Department of Electrical, Computer, and Systems Engineering, Rensselaer Polytechnic Institute, Troy, NY 12181 USA. He is now with the Institute for Microstructural Sciences, National Research Council, Ottawa, ON K1A 0R6, Canada.

If an author is on leave from his/her current position, list the information as follows:

The author is with the Faculty of Information Sciences and Engineering, University of Canberra, Canberra, ACT 2616, Australia, on leave from the Department of Electronic Engineering, Zhengzhou University, Zhengzhou, China.

Retired author: If an author is retired, list his/her last affiliation and current address (city, state, postal code, and country).

Lisa A. Tepper, retired, was with the Applied Research Laboratory, Bellcore, Morristown, NJ 07851 USA. She resides in Laguna Niguel, CA 92677 USA (e-mail: retiredauthor@yahoo.com).

Deceased author: For a deceased author, add “deceased” after the name and list his/her last affiliation.

Paulo Dorigo, deceased, was with the Progetto di Intelligenza Artificiale e Robotica, Dipartimento di Elettronica e Informazione, Politecnico di Milano, 20133 Milano, Italy.

Consultant: A consultant is treated similarly to a retired author: List the last professional affiliation and current city, state, postal code, and country.

Peter Leff Jr. was with the Department of Biomedical Engineering, University of Virginia, Charlottesville, VA 22908 USA. He resides in Charlottesville, VA 22908 USA.

V. ABBREVIATIONS, ACRONYMS, AND SYMBOLS

1) ACRONYMS

- 1) Spell out (define) terms upon first use and follow with the acronym in parentheses. The acronym should be used throughout remainder of article:

The digital signal processor (DSP) transformed the field.

The acronym must be used to define one term, not two. For example, DSP cannot stand for digital signal processor and digital signal processing in the same article. If the acronym is only used once in the article, the term is spelled out and the acronym deleted. Some acronyms are so common within a field that they do not need to be defined; if an author states this, leave as is. Spell out acronyms in titles of articles without providing an acronym, unless authors strongly object.

Note: DO NOT spell out the acronyms LGBTQIA+, LGBT, LGBTQ, LGBTQIA.

- 2) Add an “s” to the acronym in plural constructions (even if the first use of the term is plural). If the acronym is used singular afterward, drop the “s.” If the plural form of the word itself does not contain an “s” continue to add one to the acronym:

Their digital signal processors (DSPs) were the quickest. The Xylink DSP was a close second.

...where X^* denotes the set of Nash equilibria (NEs).

- 3) Acronyms can be used in subheads if they are defined before the subhead. Acronyms should not be defined in subheads. If an acronym is first used in a subhead, spell it out there and define it on its first text mention.
- 4) Do not spell out foreign or any proper name acronyms, such as the name of an object or place.
Ex: Do not spell out DLR: Deutsches Zentrum für Luft-und Raumfahrt
The research was performed with a BioLink DRK system.
- 5) Networks are not considered acronyms and do not need to be defined. Consider them proper names.
As shown in Figure 1, the variants of ResNet and VGG models for ImageNet dataset show reasonable accuracy down to 3–4-b precision.
For more compact models, such as MobileNet and SqueezeNet...
- 6) The following rules apply for defining acronyms in sidebars, figures, and tables:
 - The acronym is always defined on the first mention in the text.
 - If the sidebar, figure, or table is cited after the acronym is defined in text, the acronym is not defined again.
 - If the sidebar, figure, or table is cited before the acronym is defined in text, the acronym is defined in the sidebar, figure, or table as well as in the first mention in text.
 - If the sidebar has a DOI, meaning that it will be its own item on *Xplore*, then the acronym is defined in the sidebar.
- 7) Acronyms that are read as words do not use preceding articles except when they are used adjectivally. Note that IEEE does not use the article “the” before it.
The engineer worked for NASA but the NASA launch was successful.
IEEE is a professional association.

The Societies fall under TAB in the IEEE organizational structure.

Acronyms that are pronounced as individual letters, called initialisms, use a preceding article.

the EU
an IR laser
a CD

- 8) When an indefinite article is needed immediately before an acronym, the pronunciation of the acronym determines whether “a” or “an” should be used. “A” is correct for acronyms beginning with a consonant sound, including a vowel pronounced as a “w” or “y” sound.
a Ph.D. degree
a B2B model
- 9) When an acronym begins with a vowel sound, including a consonant pronounced with an initial vowel sound, “an” should be used.
an AR experience
an SSC initiative

Note that there may be exceptions to this rule, when an article is not used before the acronym, and those exceptions should be followed:

IEEE
TAB (IEEE Technical Activities Board)
MGA (IEEE Member and Geographic Activities)
PES (IEEE Power & Energy Society)
WIE (IEEE Women in Engineering)

GDPR (General Data Protection Regulation)

See the [“Some Common Acronyms and Abbreviations”](#) section for common acronyms and which acronyms do not need to be defined on first use, such as PC, TV, 3D, and 2D.

2) ACADEMIC DEGREES AND HONORARY DESIGNATIONS

- 1) When listing degrees earned in a biography, it should state “[S]he received the Ph.D. degree from ...” (not “[S]he received [her] his Ph.D. degree from ...”). Always add the word “degree” after a degree title if it is not included.
- 2) Default to the author’s supplied degrees. Typical abbreviations for academic degrees and honorary titles are
 - B.A.
 - B.S.
 - M.A.
 - M.S.
 - Ph.D.
 - M.S.E.E. (M.S. in electrical engineering is also acceptable)
- 3) For non-U.S. degrees, follow the author’s format.

3) TITLES

- 1) Titles should be abbreviated when used before the name:
 - The magazine was reviewed by Dr. John Enderle.*
 - Conference attendees listened to Prof. Smith’s keynote address.*
- 2) If two people have the same title, the title should precede each name:
 - Dr. Smith and Dr. Wesson presented at the conference.*
 - not Profs. Chip and Dale taught the class.*
- 3) The use of Mr., Mrs., Miss, and Ms. is not necessary and should be avoided.
- 4) Do not put commas around generational suffixes, such as John Smith Jr.

5) COUNTRIES

In general, names of countries should be spelled out. When used as an adjective, United States and United Kingdom should be abbreviated as U.S. and U.K., respectively:

He has lived in the United States since 1990.

6) GEOGRAPHICAL ABBREVIATIONS

Pembrokeshire	Pembs.		

7) TIME

Use a.m. and p.m.

The experiment began at 9 a.m. on Sunday.

The conference banquet ended at 9:30 p.m. on Thursday.

Do not use 10:00 p.m. (use 10 p.m.), 12 noon (use 12 p.m. or noon), or 12 midnight (use 12 a.m. or midnight).

Note: The exception in mathematical equations, where small caps will be used.

8) MONTHS OF THE YEAR

This is only for references. Months should be spelled out in text and calendars, where applicable.

Jan.	Apr.	Jul.	Oct.
Feb.	May	Aug.	Nov.
Mar.	Jun.	Sep.	Dec.

9) CHEMICALS

Do not spell out elements/ions, e.g.,

To date, alkaline earth (IIA) ions (Be^+ , Mg^+ , Ca^+ , Sr^+ , and Ba^+), transition metal XB ions (Cd^+), and Lanthanides (Yb^+) have been employed for TIQC.

Do not spell out the full name of chemical compounds, e.g.,

However, during our SiO_xN_y gate insulator MOSFET experiment in 1991.

10) TRADEMARK

The trademark symbols TM and ® are no longer used. Capitalize the first letter in the trademark name only. The symbols TM and ®, which often accompany registered trademark names on product packaging and in advertisements, need not be used in running text. Optionally, for the first occurrence of a trademarked product, a footnote can be placed after the trademarked name that reads “Trademarked.” or “Registered trademark.”

LIST OF IEEE JOURNAL/MAGAZINE TITLES, INTERNAL ACRONYM, AND REFERENCE ABBREVIATIONS

VI. FIGURES, TABLES, AND SIDEBARS

Authors may include appendixes in their articles, which should be reformatted as figures, tables, or sidebars, whichever is most appropriate.

A. FIGURES

- 1) Figures should appear as close to their citation in text as possible.
- 2) When referencing figures in text, always spell out the word Figure and follow it with the figure number:
The transistor diagram (Figure 3) indicates ...
Figure 9 illustrates the power supply connections for the device.
- 3) When mentioning parts of the figure, include the letter in parentheses:
Figure 9(d) shows the completed chip.
- 4) When referring to multiple parts of the same figure, treat Figure as singular as it is one figure with multiple parts:
Each step of the design process is shown in Figure 9(a)–(d).
Figure 10(a) and (b) shows the two options.

B. CAPTIONS

- 1) Figure and table captions should begin with FIGURE #. and TABLE #. and the caption should be in sentence case, followed by ending punctuation.
 FIGURE 1. The flowchart is shown.
 TABLE 2. Examples of chemical reactions.
- 2) For captions of figures with multiple parts, place labels in parentheses:
 FIGURE 1. (a) The flowchart of the simulation process. (b) The simulation display.
- 3) Be consistent throughout the issue in how parts of a figure are punctuated. Note that the label is placed before the descriptive text, not after it:
 - *Correct:* The gradual transition between stages. The transition begins at (a) stage one, (b) stage two, and (c) stage three.
 - *Wrong:* The gradual transition between stages. The transition begins at stage one (a), stage two (b), and stage three (c).
- 4) Acronyms that are defined in a figure can be placed at the end of the caption, before any source information, and should follow this format:
PET: positron emission tomography; ADC: analog-to-digital converter.
 Note that this same format can be used when defining acronyms in a table footnote.
- 5) Be consistent with how names are treated in figure captions. Use person's full name; after that, just use the last name unless expansion is needed for clarity. Use a title (such as Prof. or Dr.) if given. Mr., Mrs., Miss, and Ms. are not used. When multiple people are named in a photo, use terms such as (from left), (center), (second from right) to identify them.

C. FIGURE PERMISSION

Authors must obtain permission for any image that they did not create. If an image has been published elsewhere, authors must obtain permission from the publisher or the creator of the image for IEEE to reproduce it in the publication's print and electronic versions. Obtaining permission and paying any fees the publisher requires are the author's responsibility. For all features or departments/columns that require an IEEE copyright, the authors agree that all submitted materials pertaining to their article is of their own creation or they have permission.

To acknowledge outside sources of figures, use this style:

(Source: Name of Source; used with permission.)

Some sources have specific wording that must be used in credit lines. Such language should be used if provided in the manuscript. Do not alter.

D. FIGURE TEXT/LABELS

- 1) Text within figure images is replaced with 8-pt Helvetica type to provide a consistent look throughout the issue. The text should be caps/lowercase (each word is capitalized) following the guidelines used for headlines and subheads, and punctuation is not needed at the end of the phrase. For longer descriptions that read as complete sentences, use sentence case and add punctuation at the end.
- 2) Numerals follow the same rules as for regular text.
- 3) When there is language such as (top) or (bottom) or (left) or (right) in the figure caption or text citation, rewrite as (a), (b), (c), and so on whenever possible. Add the labels to the figure image and text citations. If the information is contained in the image, it should be removed from the image and added to the caption.
- 4) If an image contains more than one part, add labels to the image.

E. TABLES REFERENCED IN TEXT

When referencing tables in text, always spell out the word Table (and cap the "T") and follow it with the table number (do not use Roman numerals):

A comparison of key features is provided in Table 2.

Table 9 lists projections for the next 10 years.

F. DISCLAIMERS

If an author supplies a disclaimer, such as "The views expressed herein..." please move this to the first page and place it in a box, consistent with the style of the magazine/article.

G. SIDEBARS

All figures and tables in sidebars are numbered starting with S, for example, FIGURE S1 and TABLE S6. All references are also numbered starting with S, for example, [S5]. For all figure numbers, the numbering must be sequential from one sidebar to the next. The same is true for table and reference numbers. Equations that are numbered in sidebars also start with an S, for example, (S12), and the numbers are sequential from the first sidebar to the last. Note that not all sidebar equations need to be numbered.

In the final layout, sidebars must appear in the order in which they are cited in the text and be placed close to their text mentions. This may require renumbering sidebar figures, tables, equations, and/or references if the final order differs from what is in the manuscript.

Sidebars are otherwise considered as stand-alone text, so acronyms may need to be spelled out (defined) again for each sidebar; this will depend on the style of the magazine. In all cases, acronyms that are not defined in the body text need to be defined in the sidebar.

Some sidebars may appear as stand-alone articles on IEEE *Xplore* and may have DOIs.

H. ORDER

All figures, tables, and sidebars must be cited within the main text and in numerical order. If not cited in order, reorder the figures and the numbers so they are cited in order. Do the same for tables as well if they are cited out of order.

For technical feature articles, all figures should be numbered and cited in the text. For nontechnical articles and columns, such as “Society News” or “Conference Reports,” figures do not need to be numbered and, therefore, would not be cited in the text. Retain figure numbering, however, if provided by the author, and add text citations if needed.

VII. EDITING NOTES

A. EDITING GUIDELINES

1) *Introductory/Summary/Concluding Paragraphs*

If an author provides an introductory, summary (outlining the article), or concluding paragraph, do not rewrite or remove. These can be edited to style and to follow grammar as the rest of the article. Retain the author’s original wording for section heads, i.e., if an author has a section named “Introduction” please do not replace it. If the magazine does not allow a section heading over an initial cap, move the header down a few sentences where it makes the most sense and there is a natural break.

2) *Bylines*

- Do not use titles (Prof., Dr., Ph.D., P.E.) in bylines.
- Nicknames (such as Michael “Andy” Smith) should not be included in the byline or any affiliation listing, but instead can be added to the bio in this format: *Michael (Andy) Smith*.

- Include the ORCID if provided
- Any kind of President's Message must contain the President's title below their name, see example:

3) Abstracts

All original research will carry an abstract. Opinion and commentary will not have an abstract if one was not provided. Abstracts must be a single paragraph. Because abstracts must be self-contained, they shall not contain numbered mathematical equations, numbered reference citations, nor footnotes. In order for an abstract to be effective when displayed on IEEE Xplore as well as through indexing services such as Compendex, INSPEC, Medline, ProQuest, and Web of Science, it must be an accurate, standalone reflection of the contents of the article.

4) Guest/Editorials

- In editorials and guest editorials, follow the editor's preference for listing authors regarding the use of first and last names. If the editor lists the names of all authors, then all authors should be listed. If the author uses et al. for three or more authors, then follow that preference. When et al. is used, it is with the last name of the first author, not the first and last names.
- If a singular author used the term "we" to refer to him/herself, it is appropriate to retain the wording. If the author switches between "I" and "we," use "I."

Editing the Text of an Editorial:

- If the articles in the issue are listed in the editorial by title, they must be listed in an "Appendix: Related Articles" added to the end of the editorial. The sentence should be rewritten to include the Appendix citation. This needs to be done in editorials for both moderately and fully edited publications.
 - For example, if the text says "In 'Diminishing uncertainty within the training pool: Active learning for medical image segmentation,' Nath et al. revisits..." the copy editor should change the sentence to "In [A1], Nath et al. revisits..." and list the article as [A1] in the Appendix: Related Articles.

APPENDIX: RELATED ARTICLES

- [A1] V. Nath, D. Yang, B. A. Landman, D. Xu, and H. R. Roth, "Diminishing uncertainty within the training pool: Active learning for medical image segmentation," *IEEE Transactions on Medical Imaging*, vol. 40, no. 7, pp. ??-??, 2021.
- [A2] D. Mahapatra, A. Poellinger, L. Shao, and M. Reyes, "Interpretability-driven sample selection using self supervised learning for disease classification and segmentation," *IEEE Transactions on Medical*

Imaging, vol. 40, no. 7, pp. ??–??, 2021.

[A3] C. Ma, Q. Xu, X. Wang, B. Jin, X. Zhang, Y. Wang, and Y. Zhang, “Boundary-aware supervoxel-level iteratively refined interactive 3D image segmentation with multi-agent reinforcement learning,” *IEEE Transactions on Medical Imaging*, vol. 40, no. 7, pp. ??–??, 2021.

- Format the reference list as a text-only ordered number displayed list: [A1], [A2], ...
- In the body text, appendix citations should be formatted as “[A#]” where # corresponds to the item number of the ordered list.
- Note that, in the xml, this section must be composed as a list.
- Do NOT tag as references in this section for editorials.
- The appendix citations themselves are still formatted per IEEE style. Only the heading and numbering are different.
- When the final pagination for the issue is complete, the page numbers should be added to the Appendix: Related Articles.
- If the editorial contains other references that are not in the issue, these should be in a Reference section following the Related Articles.
- Note that an article within the issue may be deemed a Reference in certain cases, for example, when the editorial is discussing the research of the article and not simply summarizing.

5) Lists

- a) In vertical lists, if the list completes a sentence, lowercase the first letter of the first word on each line and omit punctuation after all lines except for the period after the last line.

We are working on resilience objectives, such as

- *maximum total load loss*
- *maximum critical load loss*
- *maximum duration of outage*
- *associated resilience matrices.*

- b) If each item/line is a complete sentence, capitalize the first letter of each item and then include the periods at the end.

Developing these projects in response to resilience criteria can be accomplished through three decision-making approaches:

- *Do no harm.*
- *Leverage project opportunities.*
- *Respond proactively.*

not

Developing these projects in response to resilience criteria can be accomplished through three decision-making approaches:

- *do no harm.*
- *leverage project opportunities.*
- *respond proactively.*

Note that an item would not end with a period if it was not a complete sentence and start with a capital letter.

- c) The punctuation of the introductory phrase depends on whether it is a dependent or independent clause. A dependent clause would not have punctuation.

Prof. Jones teaches classes in

- *basic electrical engineering*

- *physics*
- *data mining.*

- d) An independent clause would end with a colon or period, depending on the sentence. A colon is generally used when the term “as follows” or “in the following” is used.

Various disciplines were studied within the group.

- *John studied computer science.*
- *Tammy studied robotics.*
- *Harold studied control systems.*

The following disciplines were studied within the group:

- *John studied computer science.*
- *Harold studied control systems.*
- *Tammy studied robotics.*

- e) For numbered lists, change roman numerals to Arabic numerals. Note that a single parenthesis is used after the number; do not use periods or a set of parentheses.

There are three people in the group:

- 1) *John, who studied computer science*
- 2) *Harold, who studied control systems*
- 3) *Tammy, who studied robotics.*

B. AUTHOR BIOGRAPHIES

Please note that according to General Data Protection Regulation (GDPR) guidelines, author photos and biographies cannot be required.

Additional notes follow:

- 1) We do not accept QR codes in place of biographies and/or photographs (we will not send readers to a destination for which we cannot be confident of long-term accessibility).
- 2) For gender-identifying pronouns, follow the author’s preference regarding the use of he, she, or they (as a nonbinary pronoun). Do not make pronoun assumptions based on name or photo. Default to author’s supplied pronouns.
- 3) Spell out/rewrite membership year and status. Change (F’99) to “He is a Fellow of IEEE.”

The IEEE membership abbreviations are

- S: Student Member
- GSM: Graduate Student Member
- M: Member
- SM: Senior Member
- F: Fellow
- LM: Life Member
- LSM: Life Senior Member
- LF: Life Fellow

C. ACKNOWLEDGMENT SECTIONS, SUPPLEMENTARY MATERIAL, ANIMAL RIGHTS, AND CONSORTIA

1) Acknowledgment

- Is always singular
- Used to thank businesses, organizations, universities, and people for their help
- Used to list corresponding author
- Used to list funding information. For funding information, when listing contract or grant numbers, the words “contract” and “grant” should be proper case:

This work was supported in part by the National Science Foundation under Grant CNS-1552838.

- When there are multiple Grants that are funding the article, the repeating "Grant" can be consolidated and deleted. For example:

This work was supported in part by the National Science Foundation under Grants CNS-1552838, ABC 1234-5678, and XYZ 2024-2029.

- a) If the word “number” or “no.” precedes the grant or contract number, it should be deleted. If a specific contract or grant number is not given, then the words “contract” and “grant” should be lowercase:

The authors received contracts from Deltech Inc. for this project.

- b) In some cases, the authors may request credit be given to specific authors who have contributed equally to the work. This can be added to an acknowledgment section.
- c) If the author requests to add corresponding author information, it should be added here. If there is no “Acknowledgment” section, add one and list the corresponding author information under it.
- d) The use of content generated by artificial intelligence (AI) in an article (including but not limited to text, figures, images, and code) shall be disclosed in the acknowledgments section of any article submitted to an IEEE publication. The AI system used shall be identified, and specific sections of the article that use AI-generated content shall be identified and accompanied by a brief explanation regarding the level at which the AI system was used to generate the content. The use of AI systems for editing and grammar enhancement is common practice and, as such, is generally outside the intent of the above policy. In this case, disclosure as noted above is recommended. An example of this wording is as follows:

Fig. caption: Graphic(s) created using AI-generation. For image credits, please see the Acknowledgment section of this article.

2) Supplementary Material

Supplementary Material Statement

For articles that have supplementary (multimedia) material that will accompany the article on IEEE Xplore, the following statement needs to be added in the Acknowledgments section:

This article has supplementary downloadable material available at <https://doi.org/> <Vendor should add in full DOI of the article>, provided by the authors.

If there is no “Acknowledgment” section in the article, then one needs to be added. This statement lets those reading the article in print know where to find the multimedia. NOTE: This statement is in addition to any references in the text about the supplementary material: More details can be found in the supplementary materials available at <http://doi.org/10.1109/MSP.2021.3126573>. <update with the correct DOI>

If an article contains third-party URLs for multimedia, they should be left as is within the article instead of being moved to the Acknowledgment section.

3) Animal Rights

Animal Rights Statement

IEEE needs to display Animal/Human Research rights statements on article proofs. If applicable, this statement should be included in (or added to) the "Acknowledgment" section. There is a choice of two statements regarding human/animal research performed. This information comes from ScholarOne or AuthorPortal and will be in the metadata file.

The statements are as follows:

1) Articles That Are Reporting on Human/Animal Research and Have Review Board Approval

This work involved human subjects or animals in its research. Approval of all ethical and experimental procedures and protocols was granted by (Name of Review Board or Committee) (IF PROVIDED under Application No. xx, and performed in line with the (Name of Specific Declaration)).

2) Articles That Are Reporting on Human/Animal Research and Are Exempt From Review Board Approval

This work involved human subjects or animals in its research. The author(s) confirm(s) that all human/animal subject research procedures and protocols are exempt from review board approval.

4) Consortia

Consortia and Group Authorship

If a manuscript is submitted on behalf of a consortium or group, include its name in the manuscript byline AND include the full list of members in the “Acknowledgment” section.

D. CALLOUTS

Callouts (sometimes referred to as *pull quotes*) are design elements that may or may not be used to fill a page. A callout should be a short sentence taken verbatim from the text. They should make sense out of context and not contain math or reference numbers.

E. INCLUSIVE LANGUAGE

To avoid the use of insensitive terms/phrases, please refer to the [Inclusive Language Guide](#) for replacement text. Column A denotes a discouraged term/phrase within an IEEE publication, and column B provides replacement text.

F. CONFERENCE LINKING

Functionality was added for linking from journal articles to research concepts previously covered in a conference paper(s), similar to linking the correction from the original article. The following is an example from the first footnote of a *JSEN* article:

An earlier version of this article was presented at 2020 IEEE International Conference on Flexible and Printable Sensors and Systems (FLEPS) [DOI: 10.1109/FLEPS49123.2020.9239583 and DOI: 10.1109/FLEPS49123.2020.9239431].

This is currently applicable to transactions/journals and magazines (for articles first presented at a conference, such as with *IEEE Industrial Applications Magazine*).

G. CORRECTIONS/ERRATA

A *correction* is a notice that makes note of an error by the author in their original writing.

An *erratum* is a notice of an error introduced by the publisher.

H. COMMON/MISCELLANEOUS EDITING NOTES

- IEEE should be added before Society names: the IEEE Signal Processing Society, not the Signal Processing Society.
- i.e., and e.g., can be left in the text. If the author did not use i.e., and e.g., in the text, do not change “that is” or “for example” to “i.e.,” or “e.g.,”
- five plus years; 10 plus years
- 51.6° N; there is a space after the degree symbol for longitude and latitude.
- 30 °C; there is a space before the degree symbol for temperatures.
- 1 K; the degree symbol is not used with kelvin.
- Earth (capitalize; no “the”; name of the planet); the earth (the soil)
- Satellite names and the name of ships and sea vessels should be italic; the names of satellite missions are roman.
- All math variables and lowercase Greek symbols should be italic; leave vectors formatted as the author has them.
- In math, superscripts and subscripts are often roman. Single-letter variables are generally kept italic in subscripts and superscripts. If two single-letter variables are combined in a subscript or superscript, then they remain italic. Variable descriptors such as “ON,” “OFF,”

and so on remain Roman (such as T_{ON} , T_{OFF} , T^{super} , and T^{left}). Acronyms are also roman. Subscript/superscript numbers are always roman.

- Always spell out these units of measure: day (d), week (w), month (mo), year (y).
- Titles of presentations, lectures, and seminars are set off with quotation marks, not italics:

Dr. Zhang delivered the opening plenary presentation, “Millimeter-Wave CMOS Technology.”

Note that “on” is not used in these cases as “on” implies it is the topic, not the title:

Dr. Zhang delivered the opening plenary presentation on millimeter-wave CMOS technology.

- Titles of conferences and workshops are proper case but not in quotes:
Dr. Zhang delivered the plenary talk, Millimeter-Wave CMOS Technology, at the Conference on CMOS Technology.
- Do not refer to features as “papers”—they are always “articles.”
- If an author supplies a footnote, please include it at the bottom of the column it appears in in numerical order. If the footnote is a complete reference, these should be added to the reference list and a citation placed. Add query to author to inform of this.
- If a superscript citation is used per a magazine’s individual style guidelines, place the superscript after punctuation such as periods, commas, parentheses, and quotation marks, but generally before dashes, colons, and semicolons.
- “Data” is always plural as is “metadata.”
- The date of current version appears in each article after the DOI.
- When citing a section in text, the section name is in quotes and is preceded or followed by the word “section”: the section “Problem Statement” or the “Problem Statement” section.
- When citing a sidebar in text, the complete name of the sidebar is used in quotes. The word “sidebar” is not used. All sidebars must be cited in the text.
- Locations for companies, institutions, schools, etc., should not be added unless needed for clarity. Locations should not be queried for.
- Always remove section and subsection numbers if contained in the author’s original. The text may need to be reworked if the author refers to section numbers throughout.
- Not all equations are numbered in the text, and that is okay. Do not add in numbers if an equation does not have one.
- In award names, publication titles are not italicized. Also retain acronyms in award names if that is the proper title of the award.

IEEE Transactions on Automatic Control *Best Paper Award*
IFAC *Outstanding Service Award*

VIII. PROGRAM CODE

A. LAYOUT

- Use the “program code” tag for program code that appears inline; use the “PROGRAM SEGMENT” tag for code that’s set off from the main text. If the lines of code are longer than a column width and can’t be easily broken, consider turning the code into a figure. Check with the staff editor first.
- If a program line doesn’t fit on a single printed line, break and indent it to indicate the continuation. Never add extra punctuation. Authors will often request continuation lines to be right-justified or otherwise express strong preferences on this issue.

- In general, try to duplicate the spacing, indentation, punctuation, and capitalization in the author's manuscript. Programming languages don't normally recognize boldface or italics, but the author might use them for emphasis. Spacing is very important because omitting a space will often prevent a computer from recognizing a command or variable. Indentations often indicate subsets of the program. Although they aren't necessary to the computer, they make a program easier to understand.

B. PUNCTUATION

- Don't substitute two single typesetting quotation marks (‘ ’) or normal double typesetting quotation marks (“ ”) for typewriter quotation marks ("").
- Don't substitute a hyphen (-) for a minus sign (−).
- Don't substitute a raised asterisk (*) for a multiplication asterisk (*).
- Don't substitute an em dash (—) for two hyphens (--), which is a comment symbol in some languages.

C. CAPITALIZATION

Words or letters in programming languages generally represent commands (tokens) or variables. In Fortran and Basic, the general convention is to capitalize commands (such as IF, PRINT, FORMAT, GOTO) and variables (often I, N, X(n.)). In C, Algol, and PostScript, these words and letters are lowercase.

D. TOKENS IN TEXT

Use the “program code” tag for program commands to distinguish them in text. Resist using boldface, italics, underlining, superscript, or subscript. If the language is case sensitive (where a compiler doesn't see “do,” “Do,” “dO,” and “DO” as equivalent), follow the language's rules. Most popular languages aren't case sensitive.

Case insensitive

Ada, Algol, Anna, APL, assembly, Basic, Clu, Cobol, Fortran, job-control languages, Lisp (including Common Lisp), Logo, MS-DOS and other operating-system-level command interpreters (micro and mainframe), Occam, Pascal, PL/I, Prolog, SISAL, Snobol, and SQL.

Case sensitive

ABC, C, C++, Eiffel, Interlisp, Loops (including the Common Loops and Concurrent Loops dialects), Modula-2, Prolog, and Smalltalk. Most case-sensitive languages are object oriented, although some (for example, ABC) aren't. Some newer dialects of these languages might not be case sensitive; check with the author.

IX. COPYRIGHT INFORMATION

A. IEEE Copyright Lines

Authors of non-OA articles must sign and complete the IEEE Electronic Copyright Form (eCF) before their article is published (either online or in print). An article is considered published on the

date it appears on IEEE *Xplore* (this includes preprints, rapid posts. NOTE: check ePub dates are added correctly). The type of copyright selected by the author determines the type of copyright line used.

There are several different types of copyright lines used in magazine articles.

The *IEEE copyright line* is by far the most commonly used line. The IEEE copyright line Copyright Clearance Center Code (or CCC code) is used at all times whenever IEEE is selected by the author. The author's electronic signature on the eCF and use of the IEEE copyright line indicate IEEE ownership of the article's copyright. The format is as follows: ISSN/last two digits of year©full year IEEE

Example: 1066-033X/22©2022IEEE

1) U.S. Government

The U.S. Government copyright line is used when U.S. Government (USG) is selected and **all** authors of a paper are U.S. government employees and prepared the paper as part of their job. The U.S. Government line reads:

U.S. Government work not protected by U.S. copyright.

NOTE: This copyright line ends with a period.

2) EU

The EU copyright line is used when all authors are employed by one or more European Union organizations.

Example: 1051-8223 © 2022 EU

3) Crown

The Crown copyright line is used when all the authors of a paper are employees of the British or British Commonwealth governments. The Crown Copyright line is similar to the IEEE copyright line, except that the "IEEE" at the end of the line is replaced with "Crown Copyright" as follows:

Example:

1551-319X © 2022 Crown Copyright

4) Rapid-posted or preprinted articles:

If you are posting articles for one year for a print issue in 2022, the year in the copyright line **MUST** be the year of online publication. Also, the copyright line (year) information will **NOT** change when the article is printed in the following year.

Example:

An article that is being posted to IEEE *Xplore* in October 2022, but will be printed in March 2023, will have a copyright line that reads:

1066-033X/22©2022IEEE

Note: the current version date (predicted online date) should be suppressed for rapid post -x.pdf's and both the first published date and current version date should appear on the final paginated pdf as shown:

1541-1672 © 2023 IEEE
 Digital Object Identifier 10.1109/MIS.2023.3320875
 Date of publication 2 October 2023; date of current
 version 13 November 2023.

B. IEEE Open Access Publishing

Articles that follow the OA publishing model, per Directory of Open Access Journals (DOAJ) standards, use the Creative Commons Attribution License (CCBY) 4.0 license. The CC BY license grants the most liberal reuse rights of all commonly used Open Access licenses. It allows users to distribute, reuse, modify, and build upon a work as long as proper attribution to the original article is provided. Works published with a CC BY license may be reused for commercial purposes.

IEEE offers authors a choice of two Creative Commons licensing agreements. The Creative Commons Attribution (**CCBY**) License and the Creative Commons Attribution-NonCommercial-NoDerivatives (**CCBY-NC-ND**) License.

Authors are encouraged to consult with the appropriate entities within their own institutions or funding agencies to ensure their publishing agreement conforms to any set requirements.

1) **CCBY License:**

The CC BY allows authors to retain copyright to their work, and allows end users to freely reuse the work, provided that they credit the original author. The end user does not have to obtain permission from the authors or IEEE to reuse the work, even for commercial purposes or to create derivative works.

© 2024 The Authors. This work is licensed under a Creative Commons Attribution 4.0 License.

For more information, see <https://creativecommons.org/licenses/by/4.0/>

2) **CCBY NCND License:**

The CC BY-NC-ND allows authors to retain copyright to their work, and allows end users to reuse the work, provided that they credit the original author. The end user does

not have to obtain permission from the authors or IEEE to reuse the work, but the reuse cannot be for commercial purposes or to create derivative works.

© 2024 The Authors. This work is licensed under a Creative Commons Attribution-NonCommercial-No Derivatives 4.0 License. For more information, see <https://creativecommons.org/licenses/by-nc-nd/4.0/>.

3) ***CCBY + U.S. Government Option:***

When *all the authors* of an article are U.S. government employees and prepared the article as part of their job, *and they choose Open Access*, then the “U.S. Government” section of the copyright form must be signed and returned. The text used for such a copyright is:

U.S. Government work not protected by U.S. copyright.

As of 12 June 2019, all received Open Access copyrights should be changed to CCBY.

If authors of an article are affiliated with the Crown or European Commission, CCBY should be selected.

Note: Open access articles received *prior* to 12 June 2019 may carry copyright lines indicating other copyright agreements. The manuscript received date should be checked to be sure they are still valid; otherwise update to the CCBY copyright line indicated above.

Copyright lines for Open Access articles prior to 12 June 2019:

U.K. Crown Copyright for Open Access:

[1551-319X © 2018 British Crown Copyright]

European Commission for Open Access:

[1051-8223 © 2018 EU]

IEEE Open Access Publishing Agreement:

[1949-3029 © 2017 IEEE. Translations and content mining are permitted for academic research only. Personal use is also permitted, but republication/redistribution requires IEEE permission.

See <https://www.ieee.org/publications/rights/index.html> for more information.]

To obtain the Creative Commons Attribution (CCBY) license, authors will need to provide a letter or email to the editorial staff or the IEEE Intellectual Property Rights Office, in which they must clearly state their interest in submitting their manuscript under a CCBY license. The letter must also provide basic information about the manuscript (e.g., author names, article title, and IEEE publication title to which the manuscript is being submitted). Authors will receive an acceptance letter indicating that the CCBY license has been approved.

Authors who opt for a CCBY license are required to accept the Terms & Conditions of IEEE for their article to be published and posted in IEEE *Xplore*. Authors who choose to submit under a CCBY license will be subject to the publishing policies and procedures of IEEE.

A CCBY license allows authors to retain copyright in the work, but also carries very broad rights for end users. For instance, an end user may freely reuse the work provided they always credit the original author. The end user does not have to obtain permission from the author to reuse the work, even for commercial purposes or to create derivative works
